

Professional Services Engineering

DEPLOYMENT SERVICES FOR SPLUNK, Q-COMPLIANCE AND Q-AUDIT

Overview

Qmulos' Professional Services Engineering Team is your premier support partner whether implementing your first Splunk Instance or enhancing an existing one. We have your team covered with anything from installation and data onboarding to premium app configuration and consulting. Qmulos Engineers are here to ensure the success of each part of the deployment process for Splunk, Q-Compliance and Q-Audit:

- **Establish and Environment:** Kick-off, deployment, adoption, and product support
- **Stakeholder Engagement:** Tailor product/processes to meet needs of multiple teams
- **Source Verification:** Ensure your data sources produce real technical evidence
- **Risk Management:** Support modernization of cyber risk management capabilities through updated business processes and new approaches

Technical Professional Services

We offer the following engineering services to implement and tailor your organization's data-driven security and compliance solution.

Splunk Deployment Health Evaluation	• Qmulos Engineers will conduct a thorough health assessment of your current Splunk deployment to ensure your setup is effective and efficient.
Qmulos Application Readiness Assessment	• Qmulos Engineers identify whether your Splunk environment is ready for Qmulos application overlays and improve where needed.
Preparing the Splunk Environment for All Stakeholders	• In order to get the most out of your Splunk services, it's important to understand what stakeholders on your team are looking for. Qmulos Engineers facilitate that discussion.
Data Source and Technical Evidence Identification	• Using the right data makes all the difference in illuminating risk and compliance for an enterprise. Qmulos Engineers ensure your data sources are providing the right information.
Qmulos Application and Dependencies Installations	• Qmulos Apps make your Splunk environment a more effective compliance solution. Qmulos Engineers can ensure they are up and running in no time.
Sourcing and Mapping System Data	• Qmulos Engineers map out machine generated data across your enterprise as an additional source verification protocol.
Configure Controls Per Requirements	• Based on your organizational requirements and goals, Qmulos Engineers will configure controls for adequate monitoring and reporting.
Dashboard Customization	• Different stakeholders need to see different dashboards. Qmulos Engineers build the perfect customized summary pages for quick and easy viewing and reporting.
Knowledge Transfer and Consulting	• Qmulos Engineers will walk your team through the deployment steps and ensure a transfer of knowledge to stakeholders and critical team members.
Roadmapping and Training Plans	• A roadmap for the future is essential to ensure continued effective usage of your Splunk environment and Qmulos applications. Qmulos Engineers help you build that plan.
